Höhenverstellbare Rückseitenwerkzeuge

Height adjustable back working tools

GRAF-Einsätze jetzt auch „Überkopf“ höheneinstellbar.

All GRAF insert cassettes can be mounted with the insert facing up or down and you can still adjust the center height.

Feineinstellung kann auch „Überkopf“ vorgenommen werden.
Bessere Späneabfuhr bei grobspanigem Material, z.B. bei langspanenden Werkstoffen wie Kunststoffen usw.

Fine adjustment is possible with the insert facing upside down for better chip evacuation. Especially for long stringy materials such as plastic.

Berechnung des Steigungswinkel β

Der Steigungswinkel wird mit folgender Formel berechnet:

$$\beta = \arctan \frac{P \times N}{\pi \times D}$$

β - Steigungswinkel [°]
 P - Teilung [mm]
 N - Anzahl der Gänge
 D - Flankendurchmesser [mm]
 Steigung $L = P \times N$

Der Steigungswinkel kann ebenfalls aus dem untenstehenden Diagramm abgelesen werden.

Calculating the Helix Angle β

The helix angle is calculated by the following formula:

$$\beta = \arctan \frac{P \times N}{\pi \times D}$$

β - Helix angle [°]
P - Pitch [mm]
N - No. of starts
D - Pitch diameter [mm]
Lead = P x N

The helix angle can also be found from the diagram below.
